Work experience

Front-end developer. [Vivid](#). Russia, Moscow. July 2021 – Present.

Accomplishments:

- Delivered the brand new CRM system in six months to replace Intercom solution.
- Coordinated with the designer on how we should stylize the parts of the CRM application, which UI framework to use in order to keep the same speed and quality of feature delivery.
- Improved my code style rules and automated code style check-ups with bundle: ESLint + Prettier + Husky.
- Coordinated with the backend-team on how the API should look like, which data format is preferable, which methods and protocols should we use: Apache Avro, JSON RPC, REST, etc.
- Researched, coordinated and implemented cross-domain SAML authorizations for our CRM + Customer Support Chat applications.
- Helped our team leader to optimize release cycles, to improve communications between the team members, to get a better understanding of the front-end world and possibilities.
- Created a flexible access management system for the CRM application based on roles.
- Conducted several internal frontend meetups to share my knowledge and inventions with my colleagues.

Front-end developer. [Apibank](#). Russia, Moscow. July 2019 – July 2021.

Accomplishments:

- Developed five projects from scratch, supported 6+ legacy projects from different vendors.
- Created code style rules and automated code style check-ups with bundle: TSLint + Prettier + Husky.
- Migrated three monolith projects to a newly established applications' architecture for better loading and maintaining performance.
- Automated lanes for applications building and Play Market/App Store deployment.
- Delivered billing system frontend application alongside with mobile application in three months.
- Created metrics gathering system for analytics department.
- Coordinated with the backend-team on how the API should look like, which data format is preferable, which methods and protocols should we use: Apache Avro, JSON RPC, REST, etc.

Full stack web developer. [Ronas IT](#). Russia, Omsk. July 2017 – July 2019.

Accomplishments:

- Developed isomorphic real estate marketplace that includes overly detailed lot creation functionality.
- Optimized application build scripts to minimize bundle sizes.

Full stack web developer Intern. [HWDTech](#). Russia, Omsk. March 2017 – July 2017.

Accomplishments:

- Created frontend and backend parts of the intern project.
- Built Grant-Privileges Access control system based on Node.js with PostgreSQL.
